### Meshillogic Online Campus

Meshillogic Online Campus is a web solution of high leverage for the control and management of schools with its organized and structured software modules, all integrated and interwoven to go with the latest concepts of WEB Applications. Following its precursor, the celebrated product CAMPUS Plus(V 4.3), which is being used and benefited extensively for many national and international schools as an Educational ERP system, the latest web solution 'Online campus' has the advantage of having multiple Gate Ways to enter in.

The Student gate way, Parent gate way and the Management gateway are all different in look, feel and appears as separate web applications, digging information from the internet cloud. Still, it makes a smooth transition for existing clients and helps new users achieve higher productivity.

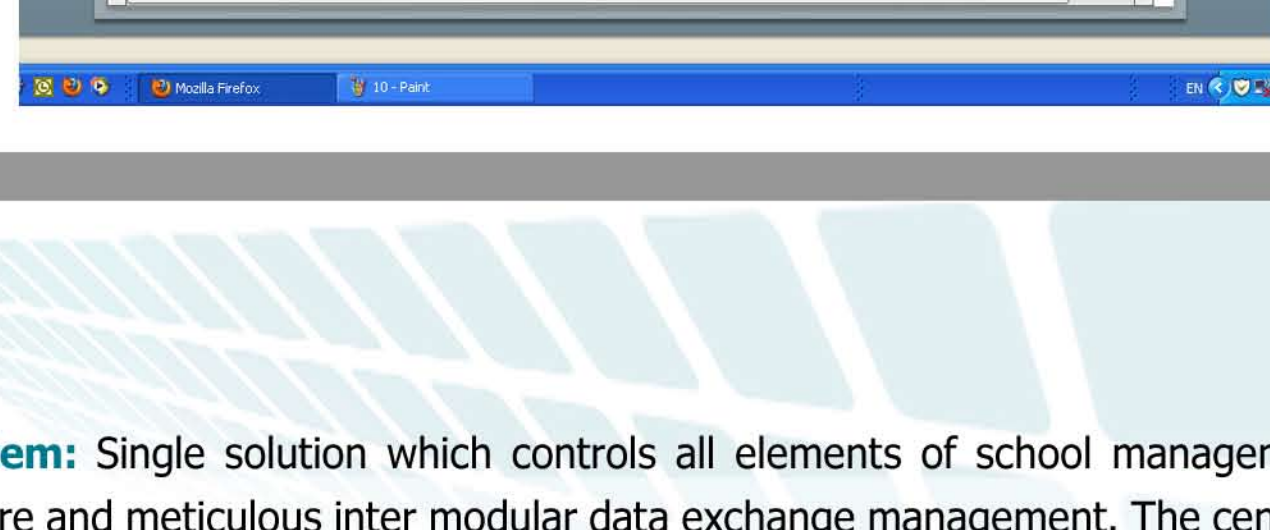

Online campus offers integration with smart cards, bio-metric devices and bar code devices for high-tech schools.

Enjoy the truly exceptional solutions that help and ensure total satisfaction. We work on your requirements right from scratch and respect your business and service.

### What is Unique in Online Campus?

Online Campus is elegant in its operational concept of a "Service Oriented Approach". The distributed and synchronized data cloud provides the source of information needed for Student, Parent, staff and management at a much higher speed. Online Campus offers robust features that benefit educators, students, and staff who find the software as their most appropriate service provider to unravel their concerns and accomplish their activities.

The product suite is designed to speed up various tasks across the school system and offer modules from student registration to promotion, academic records entry to financial accounting to Timetable along with all the relevant reports. The package should help the management to see where their institution stands and make sure it achieves the best in demanded time line.

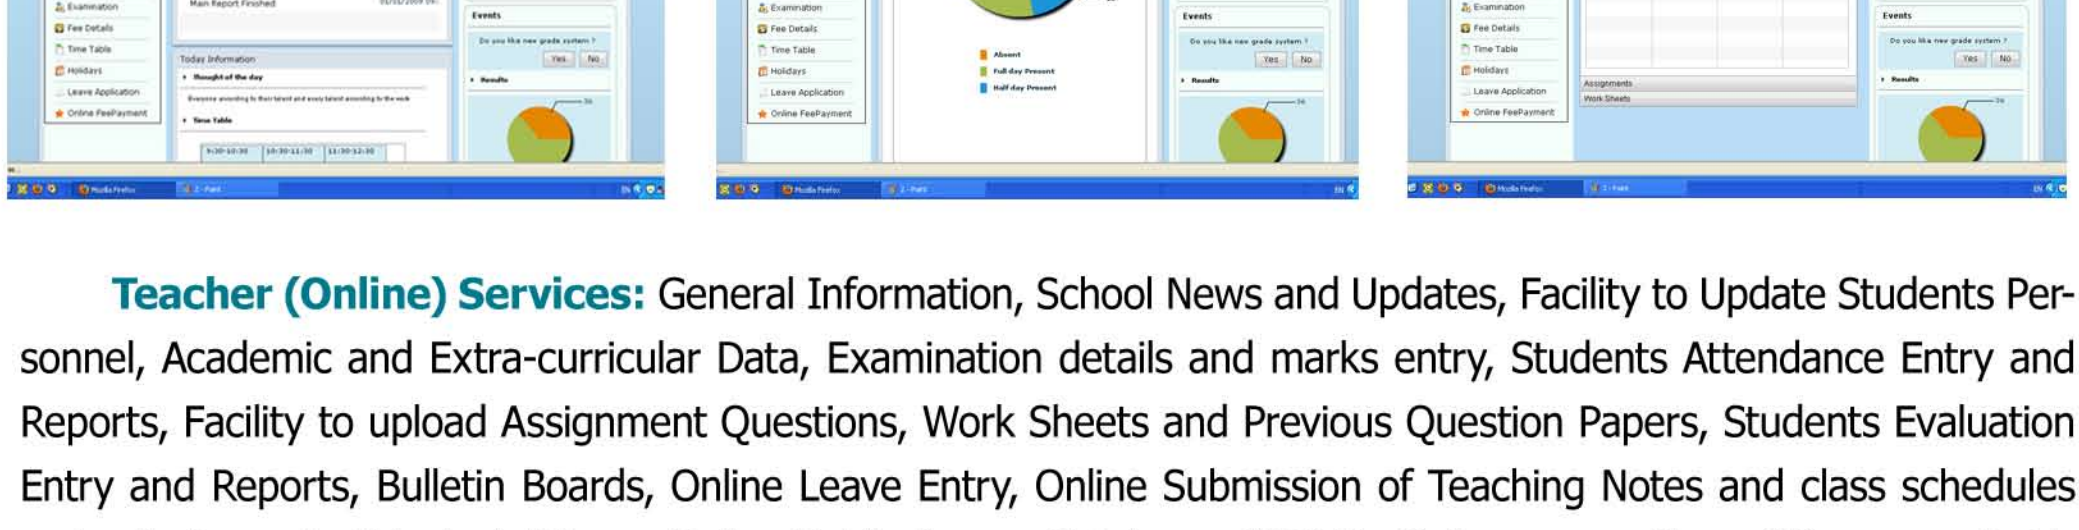

**School ERP System:** Single solution which controls all elements of school management issues with highly tuned data structure and meticulous inter modular data exchange management. The central data repository and careful design of data structure eliminates the redundancy of data to provide for an N-tier service based system while implementing automation with multiple vendors and software for managing different activities of the school.

**Off-line and on-line Versions** It is another unique feature that Meshillogic WebCampus comes with offline and online versions with a high-end potential for the two way data synchronization to link these versions. Work offline at school and make it live on the web by auto sync. Feature of the system. Get the double advantage of using it off-line and feeling it online and more over makes the website secure and personalized and become comfortable having online and offline usage of the system
